

We help patients retain their hair during chemotherapy.

What is scalp cooling?

Scalp cooling is a **simple treatment that can help to prevent hair loss** caused by certain chemotherapy drugs. The use of scalp cooling has been proven to be effective in preventing chemotherapy induced alopecia, or hair loss, and can result in retaining much of the hair during treatment.

Hair loss is not inevitable

Scalp cooling empowers you with the opportunity to preserve privacy, boost confidence and maintain a positive attitude towards treatment. **Please ask your doctor for information on scalp cooling today.** It's time to take back some control.
